

## OPERATORY DISINFECTION: AT-A-GLANCE

Begin cleaning and disinfecting process wearing the appropriate PPE, including eye, nose, and mouth protection and heavy-duty gloves

**Important reminder:**

Perform hand hygiene before and after donning and doffing PPE

Break down operatory, transporting used materials and equipment to sterilization area in an appropriate, biohazard-labeled container

**Important reminder:**

Flush water lines at the start of the day and between patients

Clean and disinfect all exposed surfaces strictly following appropriate protocols and product label instructions

**Important reminder:**

Ensure all surfaces are free of visible contamination prior to final contact with disinfectant

Set up treatment room for next patient, including replacing all barrier protection

**Important reminder:**

Set out only supplies and materials in the amount required for scheduled care
